Important Note Please Read Carefully

For demonstration purpose only, this free version Chinatag study guide contains **10** full length questions selected from our full version products which have more than **200** questions each.

This Study guide has been carefully written and compiled by Chinatag certification experts. It is designed to help you learn the concepts behind the questions rather than be a strict memorization tool. Repeated readings will increase your comprehension.

For promotion purposes, all PDF files are **not** encrypted. Feel free to distribute copies among your friends and let them know Chinatag website.

Study Tips

This product will provide you questions and answers along with detailed explanations carefully compiled and written by our experts. Try to understand the concepts behind the questions instead of cramming the questions. Go through the entire document at least twice so that you make sure that you are not missing anything.

Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check the products page on the <http://www.chinatag.com> website for an update 3-4 days before the scheduled exam date.

Please tell us what you think of our products. We appreciate both positive and critical comments as your feedback helps us improve future versions. Feedback on specific questions should be send to feedback@chinatag.com.

Thanks for purchasing our products and look forward to supplying you with all your Certification training needs.

Good studying!

Question No: 1 Your company's network consists of one Active Directory forest. You deploy Live Communications Server 2005 in the forest. The company's written security policy states that all instant messaging (IM) communications must be archived. You install and configure Live Communications Server 2005, Archiving service. You need to configure the components that will be archived. Which component or components should be archived? (Choose all that apply.)

- A. IM communications between internal users
- B. IM communications between internal users and federated partners
- C. audio and video communications between internal users
- D. audio and video communications between internal users and federated partners
- E. file transfers between internal users
- F. file transfers between internal users and federated partners

Answer: A, B

Question No: 2 Your company's network consists of one Active Directory domain. You deploy a Live Communications Server 2005, Enterprise pool in the domain. A user named Susan changes her last name. Susan's last name is changed in Active Directory. However, her new last name is not found by using the Find feature of Microsoft Office Communicator 2005. You discover that you can find Susan by searching on her previous last name. You need to ensure that users can immediately find Susan by searching on her new last name. What should you do?

- A. Restart the Address Book Service (ABS).
- B. Run the Replmon.exe tool to force Active Directory replication.
- C. Run the Abserver.exe tool with the syncnow parameter on the Address Book Service (ABS) server. Instruct all users to sign out of Office Communicator and then sign in again.
- D. Run the Gpupdate.exe tool with the sync parameter on the server running Live Communications Server 2005. Then restart the server.

Answer: C

Question No: 3 Your company's network consists of one Active Directory forest. You deploy Live Communications Server 2005 on a server named Server1 in the forest. Server1 is configured to communicate over TCP. Your company wants to support an additional Session Initiation Protocol (SIP) namespace. You create a DNS SRV record for the new namespace. You need to allow all users to sign in to Server1 by using the new SIP namespace. What should you do?

- A. Change all users' e-mail addresses to use the new namespace.

- B. Add the new namespace to the list of supported SIP domains.
- C. Add the new namespace to the list of User Principal Name suffixes.
- D. Add the new namespace to the Host Authorization list.

Answer: B

Question No: 4 Your company's network consists of one Active Directory forest. You deploy a Live Communications Server 2005, Enterprise pool with multiple front-end servers in the forest. Live Communications Server 2005, Access Proxy runs on a server named Server2. Live Communications Server 2005, Archiving service runs on a server named Server3. Server3 runs Microsoft SQL Server 2000 with Service Pack 4. The company's written security policy states that all instant messaging (IM) communications must be archived for auditing purposes. You need to ensure that all IM communications are archived. What should you do?

- A. Install Microsoft SQL Desktop Engine (MSDE) on all front-end servers.
- B. Install Microsoft Message Queuing (MSMQ) on Server2. Enable and configure the archiving agent on Server2.
- C. Install Microsoft Message Queuing (MSMQ) on all front-end servers. Enable and configure the archiving agent on all front-end servers.
- D. Install Microsoft Message Queuing (MSMQ) on one front-end server. Enable and configure the archiving agent on that front-end server.

Answer: C

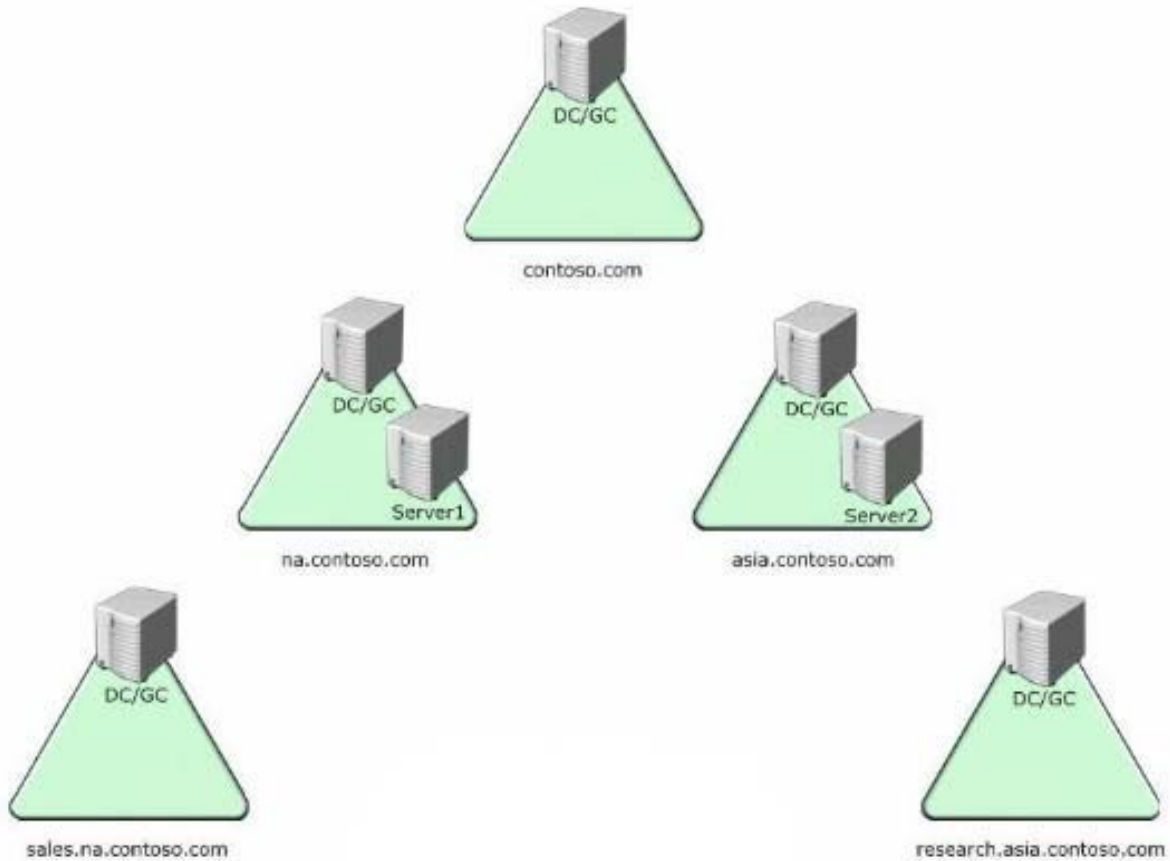

Question No: 5 Your company's network is configured as shown in the exhibit. (Click the Exhibit button.)

Live Communications Server 2005 is deployed in the forest.

Users in na.contoso.com can locate users in na.contoso.com and sales.na.contoso.com by using the Search for a contact feature of Microsoft Office Communicator 2005. Users in asia.contoso.com cannot locate users in asia.contoso.com and research.asia.contoso.com by using the Search for a contact feature of Office Communicator.

You need to ensure that users in each domain can use the Search for a contact feature to locate users in all domains. You want to ensure that no additional rights are granted.

Which two actions should you perform? (Each correct answer presents part of the complete solution. Choose two.)

- A. On **contoso.com**, run the **DomainAdd** command to add **na.contoso.com** and **asia.contoso.com**.
- B. On **na.contoso.com** and **sales.na.contoso.com**, run the **DomainAdd** command with the **usersonly** parameter to add **asia.contoso.com**.

- C. On na.contoso.com and asia.contoso.com, run the DomainAdd command with the usersonly parameter to add contoso.com.
- D. On research.asia.contoso.com and research.contoso.com, run the DomainAdd command with the usersonly parameter to add na.contoso.com.

Answer: B, D

Question No: 6 Your company's network consists of one Active Directory forest. You deploy a Live Communications Server 2005, Enterprise pool in the forest. You are preparing to perform routine maintenance on one of the servers in the Enterprise pool. You need to ensure that services are not disrupted for users homed on the Enterprise pool. What should you do?

- A. Stop the Live Communications Server service on the front-end server that requires maintenance.
- B. Stop the MSSQLSERVER service on the back-end database server for Live Communications Server 2005.
- C. Create a new Enterprise pool. Move all users to the new pool.
- D. Back up the existing Enterprise pool. Create a new Enterprise pool. Restore all users to the new pool.

Answer: A

Question No: 7 Your company's network consists of one Active Directory domain named fabrikam.com. You deploy a Live Communications Server 2005, Enterprise pool in the domain. The Address Book Service (ABS) is published to a network file share. You need to provide the Microsoft Office Communicator 2005 clients with the location of the ABS files. What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

- A. Create an SRV record for _ABSInsideURL._TCP.fabrikam.com.
- B. Create a Group Policy object (GPO) that specifies the location of the ABS files. Link the GPO to the fabrikam.com domain object.
- C. Configure the Enterprise pool to specify the location of the ABS files.
- D. Configure the Office Communicator client on each user's computer to point to the ABS server as the sign-in server.

Answer: B, C

Question No: 8 Your company's network consists of one Active Directory forest. You deploy a Live Communications Server 2005, Enterprise pool in the forest. You configure Live Communications Server 2005 to archive all instant messaging (IM) communications. You discover that IM communications for users in the accounting department are not being archived. You confirm that IM communications for users in other departments are being archived. You need to ensure that all IM communications are archived. What should you do?

- A. Run the Configure Live Communications Users Wizard. Select the Configure Archiving option. Select Use Default Archiving Settings.
- B. Associate the front-end servers of the Live Communications Server 2005, Enterprise pool with a new Live Communications Server 2005, Archiving service.
- C. Run the Move Live Communications Users Wizard. Move the accounting users to a different pool that is configured for archiving.
- D. Run the Delegation of Control Wizard on the organizational unit (OU) holding the domain object. Grant the accounting users Read-Write permissions on the Live Communications Server 2005, Archiving service computer objects.

Answer: A

Question No: 9 Your company's network consists of one Active Directory forest. You deploy a Live Communications Server 2005, Enterprise pool in the forest. You configure Live Communications Server 2005 to archive all instant messaging (IM) communications. The company's written security policy states that all IM communications must be archived. IM communications that are sent by the users in the finance and legal departments must include the full IM communication. IM communications that are sent by users in the sales and marketing departments require only the usage data. All user accounts are stored in organizational units (OUs) for their respective department. You need to ensure that the archiving requirements are met. What should you do?

- A. Edit the Global Properties archiving settings. Select the Do not archive message body check box.
- B. Run the Configure Live Communications Users Wizard on the Sales and Marketing OUs. Select the Configure Archiving check box. Select the Archive Without Message Content option.
- C. Run the Configure Live Communications Users Wizard on the Finance and Legal OUs. Select the Configure Archiving check box. Select the Use Default Archiving Settings option.
- D. Run the Configure Live Communications Users Wizard on the Sales and Marketing OUs. Select the Configure Archiving check box. Select the Use Default Archiving Settings option.

Answer: B

Question No: 10 Your company's network consists of one Active Directory forest. You deploy Live Communications Server 2005 and Live Communications Server 2005, Access Proxy in the forest. Archiving is configured to store all instant messaging (IM) communications. The company's written security policy states that internal users must be notified, upon initiation of each IM session, that the communication will be archived. You need to ensure that the Microsoft Office Communicator 2005 client is configured to meet this requirement. What should you do?

- A. Create a Group Policy object (GPO) to enable the Warning Text GPO setting and enter the appropriate notification text. Link the GPO to the domain object.
- B. On the Access Proxy, select the Enable archiving disclaimer notification to federated users check box.

- C. Create a Group Policy object (GPO) to enable the Interactive logon: Message text for users attempting to log on GPO setting and enter the appropriate notification text. Link the GPO to the domain object.
- D. Create a new tab for the Office Communicator client that connects to the company's internal Web site that defines the company's archiving policy.

Answer: A
